

Three Crabs Area Study

(Dungeness Comprehensive Water Quality Study)

The Clallam Conservation District is undertaking an assessment of the environs of Dungeness Bay, in the area between Meadowbrook Creek and Cassalery Creek to:

- Investigate water quality issues
- Address flooding concerns
-

Why is the Conservation District undertaking this study?

The goal of the project is to involve stakeholders in the area, both public and private, in a process to identify long-term solutions to the area's water quality and flooding problems and ecological restoration opportunities.

What will the study accomplish?

The result of the project will be a comprehensive water quality plan with a prioritized list of actions. The action plan will contain input from many stakeholders and reflect the interest and concerns of both citizens and natural resource managers. It will clearly outline the next steps for accomplishing restoration, improvement in water quality, and addressing the flooding issues of the area.

How can you be involved?

As a landowner in the project area, your input is critical to the success of the planning process. There are several ways to get involved:

1. Serve on the Project Workgroup

The Workgroup will meet regularly during the two-year project and will seek input from stakeholders in the area, gather information, and guide and evaluate the plan recommendations.

2. Call, write or visit our website to give us feedback and comments about the project:
